MANIKANTA KORIMILLI

manikantakorimilli21@gmail.com | Portfolio | +91 9492014400 | LinkedIn | GitHub

Technical Skills

Languages:	JavaScript, TypeScript, Go, C++
Frontend:	React.js, Redux, Zustand, CSS, TailwindCSS, Shadcn UI
Backend:	Java, SpringBoot, Node.js, Express.js, REST APIs, Microservices, Event-Driven Architecture
Databases:	MongoDB, PostgreSQL, MySQL
Developer Tools & AI:	Git, GitHub, GitHub Actions, Docker, Postman, LLM APIs (OpenAI, Anthropic, Gemini, Azure OpenAI), Prompt Engineering, AI Feature Integration, AI-Assisted Development
Others:	DSA, Competitive Programming, Microservices, OOPS, System Design Fundamentals

Experience

Software Development Engineer-1 *Aug 2025 – Present*

DeeptaAI – Hyderabad

- Built a retention analytics dashboard ("Compass") that helps product teams find user-behavior patterns linked to long-term retention.
- Owned frontend-led, full-stack delivery of a University Management Dashboard serving **10,000+** daily users, improving frontend performance by **45%** through code splitting and lazy loading.
- Built a cohort sync ("Third-Party Cohorts") that exports user cohorts to external tools, with webhook integrations, recurring sync schedules, and sync health monitoring.
- Drove code quality and release stability through active participation in code reviews, debugging, testing, and deployment.

Associate Software Development Engineer *Apr 2025 – Aug 2025*

Apxor – Hyderabad

- Debugged chatbot workflows on the Kore.ai platform, improving conversational reliability and bot performance.
- Built secure encryption/decryption mechanisms for public APIs, protecting sensitive data exchanged with external systems while ensuring authentication integrity and security compliance.
- Delivered scalable, responsive frontend features using React.js and TypeScript for production web applications.

Freelance AI Trainer *Nov 2024 – Apr 2025*

OutlierAI – Remote

- Evaluated AI-generated responses for accuracy and reasoning quality, providing corrective feedback to improve model performance.
- Delivered coding solutions for benchmark tasks supporting AI training and evaluation pipelines.
- Authored **100+** technical recommendations that improved model reasoning accuracy by **15%**.

Projects

Multi-Provider Messaging Service *GitHub | Live App*

- Built a provider-agnostic SMS service exposing one REST API for single, batch (up to **100** recipients), and scheduled daily sends through Twilio and Vonage, with the primary provider switchable through configuration alone.
- Designed a config-driven HTTP provider engine (templated requests, JSONPath response parsing, retry rules, GSM-7/Unicode handling) so new SMS providers can be added through JSON or a runtime REST API with **zero** code changes or restarts.
- Standardized errors as RFC 7807 Problem Details with stable error codes, masked provider secrets in all API responses, validated configuration at startup, and automated build and deployment to Azure with GitHub Actions.

FilmyGPT

- Built a Netflix-style movie discovery web app with React and Redux Toolkit, featuring Firebase authentication and live now-playing, popular, top-rated, and upcoming catalogs from the TMDB API.
- Integrated OpenAI GPT-4o natural-language search that turns free-text queries like "Indian comedy movies" into **5** curated recommendations, resolving each title against TMDB in parallel with `Promise.all`.
- Structured data fetching into reusable custom React hooks and Redux slices, and added trailer playback, shimmer loading states, and a light/dark theme toggle on the player page.

Education

Aditya College of Engineering *2020 – 2024*

B.Tech in Electronics and Communication Engineering, CGPA: 8.1 *Surampalem, Andhra Pradesh*

Achievements

- Top Performer, OwlCoder Program; ranked Top 10 in multiple college-level coding competitions (Technical Hub).
- Top Contributor, Outlier AI – recognized for improving instruction adherence and response quality in AI training tasks.
